

From Manual Work to Process to Fully Automated with AI

Today's Challenges in the Goods Receipt Area of Logistics & Supply Chain

Time-consuming

Manual data entry from delivery notes takes minutes per item. Spends 60%+ of time on non-value-adding tasks.

Error-Prone

Manual transcription leads to 2-5% error rates. Wrong quantities, misread part numbers cause costly issues.

High Variance

Every supplier uses different label for mats and data structures. Rule-based systems can't keep up.

Vision AI Document Reader

Goods Receipt · Automated Data Extraction

70% time savings vs. manual data entry

All formats: emails, PDFs, scans, paper docs

AI recognizes handwritten content & signatures

Auto matching with ERP data & approval workflow

Vision AI Label Reader

Incoming Goods · Full Traceability

30% faster label scanning vs. single bar code reader

All codes: 1D, 2D, QR, DataMatrix & printed text via OCR

Multi label capture in single camera shot

100% traceability — no data left behind

Where We Automate Your Supply Chain

COMI Vision AI integrates at the two most labor-intensive touchpoints

Available now

Coming soon

Goods Receipt

Automated extraction, processing and data matching of delivery notes

Incoming Goods

Full capturing of product labels and its information for 100% traceability

Master Data

Master data extraction from product data sheets matching your ERP by AI

Order Entry

Automated order processing

Outgoing Goods

Control and matching of all dispatch data

ERP / WMS Integration

Data flows directly — no manual re-entry

Private Cloud or local on-premise hosting

Compliant with your industry standards

Zero Retraining Required

AI understands new layouts out of the box
